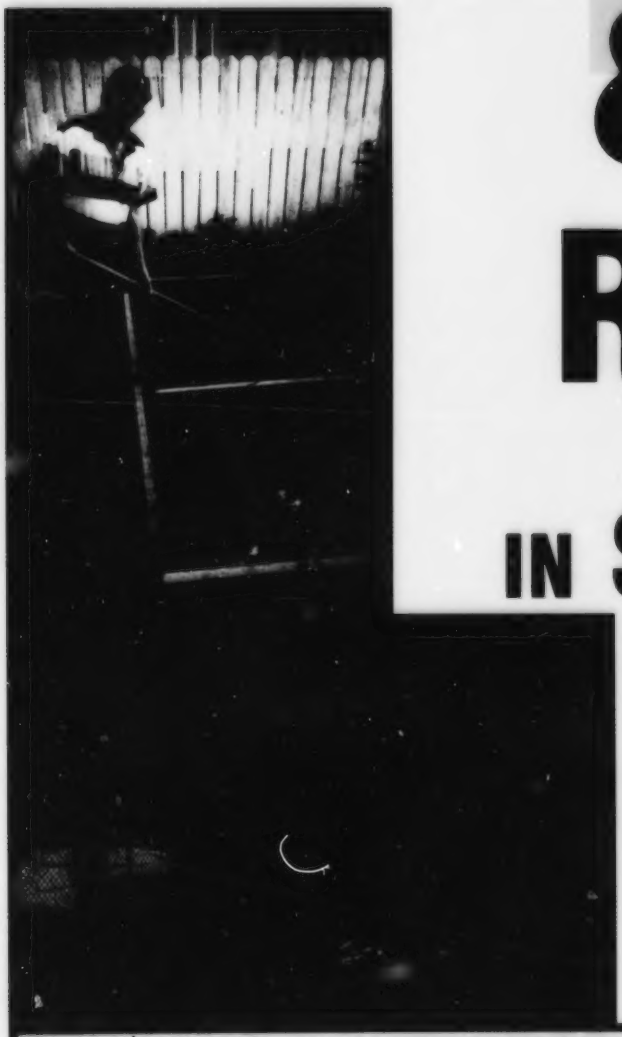
REUSING & RECYCLING IN SASKATCHEWAN FOR 2000



A directory of what, how and where to reuse and recycle in Saskatchewan

SWRC

This is a FREE publication and NOT for resale.

"I'm a proud trailblazer"

At Tetra Pak Canada we have a long-standing commitment to environmental education. Our mission is to provide our customers and the public innovative, value-added packaging that is safe, convenient, and environmentally friendly. Supporting the *Trans Canada Trail "I'm a Proud Trailblazer"* School Program is just one of the ways we contribute to helping kids and their communities celebrate and learn more about our environment. Through this program, Tetra Pak is proud to help young Canadians become trailblazers, and blaze their own trails to a better environment from sea to sea to sea.

A Message from the Minister of Environment and Resource Management

I would like to take this opportunity to extend my sincere thanks to the Saskatchewan Waste Reduction Council for publishing this directory of Saskatchewan businesses and organizations involved in recycling.

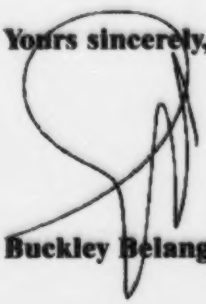
This guide offers valuable information on what and where we can reuse and recycle in Saskatchewan. You, your family and your community can improve our environment and the use of our natural resources by taking advantage of these services.

We all have a role to play in protecting our environment. I encourage all of you to participate in environmental management decisions affecting your community and to make personal decisions that improve our environment. We have made a difference ... and we can continue to make a difference each time we make a choice to recycle.

Saskatchewan is blessed with clean air, fresh water, healthy soil, abundant wildlife and healthy trees and plants. Our province's economy and our personal health depend on these features. If we hope to maintain an environment that provides us with so many important social and economic benefits, we must work together to keep it clean.

To find out more about reuse and recycle programs in your area, please contact the Saskatchewan Waste Reduction Council.

Yours sincerely,



Buckley Belanger

About SWRC

The Saskatchewan Waste Reduction Council is a nonprofit, non-government organization whose mission is to help Saskatchewan and its people attain the environmental, economic and cultural benefits that come from reducing waste.

Our goal is to make waste reduction activity commonplace in Saskatchewan. We want everyone — individuals, community groups, businesses and institutions, municipalities and government — to analyse their activities and find ways to accomplish their goals with a minimum of waste.

SWRC helps to maintain a resource centre on waste reduction and other environmental issues. We have information on a wide range of topics and issues. We also respond to information requests from businesses, municipalities, community groups and students about recycling and waste reduction in Saskatchewan. SWRC conducts workshops and gives presentations on waste reduction issues, and organizes biannual conferences. Our newsletter, *WasteWatch*, is published quarterly and contains updates on waste reduction activity around the province and throughout the world. Our website, www.link.ca/~swrc, contains Saskatchewan recycling information, some of our fact sheets and newsletters, links to other recycling and environmental sites, and general waste reduction information.

SWRC believes we all need to work together to bring about real change. We have developed partnerships with governments, businesses and community groups to carry out projects and activities. We believe in bringing all voices to the table to arrive at workable solutions. Our board of directors has representatives from business, governments, nonprofit organizations and individuals. Consider becoming a member of SWRC and join in the work for a brighter, less wasteful, future.

Funding for SWRC comes from memberships, projects and fee for service activities. We have recently instituted a sustaining membership program in which corporations contribute a minimum of $5,000 to our operations. In return, SWRC provides services of mutual benefit. We gratefully acknowledge the support of our 1999 sustaining members:

IPSCO, Inc.
Tetra Pak (Canada) Inc.
SARCAN Recycling
Sask. Scrap Tire Corporation
Sask. Association for Resource Recovery
Sask. Environment & Resource Management

■ Composting

Organic materials such as food scraps, leaves, grass clippings, plant stalks and tree trimmings make up 25-50 percent of the waste stream. This sizable chunk of the garbage pie comes well designed for recycling–in natural systems, these materials return to the soil as organic matter. SWRC promotes composting and other complimentary activities as an important part of any waste minimization program. Focussing on the organic fraction of the waste stream means that your efforts can achieve a sizable reduction. The process can be done locally in backyards or in larger scale sites. The product can be used, to good effect, on local soils so there is no need to move things great distances or to depend on distant markets. We recommend that Saskatchewan communities begin their composting programs by promoting back yard composting. Every resident who undertakes composting on their own reduces municipal waste management costs. In hamlets and villages, backyard composting programs may be sufficient to handle nearly all of the community's organic waste.

Composting programs run more smoothly if citizens ve access to information. When people understand how the compost process works, they can avoid odour and pest problems or solve them quickly when they arise. One way to provide this information and promote backyard composting is to use Master Composters. These are trained volunteers who act as local resource people, providing advice and giving demonstrations. The SWRC provides a weekend training program to train Master Composter volunteers. Master Composters learn composting techniques, troubleshooting, and adult education skills. This course is offered on a fee for service basis to Saskatchewan municipalities. The volunteers, in return for having their training paid, agree to devote 15 hours to compost education activities in the year following their training. Master Composters also receive instruction on general waste reduction topics and often end up spearheading other waste reduction programs. Contact SWRC for more information on the Master Composter Training Program.

Centralized, municipal composting is becoming more common in the province. SWRC has information on how to get started, as well as a network of individuals who have been involved in running municipal composting programs and can provide valuable expertise.

SWRC COMPOST RESOURCES:
Pamphlets on backyard scale composting and alternatives, municipal composting, vermicomposting
Table top displays: available for loan
Slide show: Home Composting on the Prairies (80 slides and script) loan or purchase options
Master Composter Training Program

Animal Products

Animal products include abattoir water, fat and bones from meat cutting operations and kitchen grease (except French fry grease). The collected material is rendered to produce edible and non – edible fats, meal and other substances used for feed stocks or for human consumption.

Building Materials

This category consists of those companies in Saskatchewan which recover used building materials and refurbish them for resale. Items may also be recycled.

Clothing/Textiles

Most clothing collected in Saskatchewan is reused. Unusable items are recycled into towels and cleaning cloths, which are usually sold to garages, service stations, oil manufacturing and service industries throughout Saskatchewan.

Composting

Organic materials make up an average of 25 to 50 percent of municipal solid waste. Organic material, including yard waste and vegetable kitchen scraps can be collected to make a soil conditioner. The agencies listed under this heading practice some form of composting or provide information.

Environmental Services

This listing provides the names of companies which recover hazardous substances from a variety of sources. They may also practice reuse by cleaning and reconditioning used parts.

Equipment

Glass

The amount of waste glass generated annually in Saskatchewan is in the order of 60,000 tonnes. Container glass from Saskatchewan is recycled into glass beads (used for reflectorising roadway paint stripping and some road signs), Fiberglas insulation and new containers. It is also reused as road construction material.

Laboratory Services

Metals

Iron and Steel (Ferrous Metals)

Approximately 60,000 tonnes of ferrous metals enter the solid waste stream annually. However, a larger amount of scrap ferrous metal is generated outside the municipal solid waste stream. Typical examples of this type of scrap are auto hulks, machinery and building materials. Most scrap ferrous metal collected in Saskatchewan is recycled by IPSCO in Regina. There are also two foundries in Saskatoon that make castings from scrap ferrous metal.

Metals (Non-Ferrous Metals)

About 20,000 tonnes of non-ferrous metal is discarded in the province annually. The single largest collector is SARCAN. About 1,600 tonnes of aluminum beverage cans are shipped to the United States annually where they are remanufactured into new aluminum cans. Other non-ferrous metals, such as copper, brass, gold and silver are used to remanufacture new metal products.

Office Products

Re-inking cartridges not only helps reduce waste in our landfills but also saves the consumer at least one half the cost of new retail ribbons.

Paper

Annual paper and paper product waste generation in the province is about 350,000 tonnes. Much of the paper collected is sold in Western Canada for recycling into new paper products. One such recycler located in Saskatchewan is UFR Urban Forest Recyclers Incorporated in Swift Current.

Personal Care

Substantial amounts of plastic and other packaging are sent to landfills every year. This category includes companies which offer product refill stations and/or carry products in minimal packaging. Disposable diapers also have a great impact on our landfill systems so alternatives to disposables are offered here.

When choosing a barber or beauty salon, be sure to ask if they have a product refill station to help eliminate waste and save you money.

Plastic

Annual plastic waste generation in the province is about 70,000 tonnes. Most collection involves plastic beverage containers, about 2,000 tonnes annually. Some household containers and grocery bags are also collected. Most plastic collected here is recycled in central Canada or in the U.S.A.

Products/Promotions

Refundable Beverage Containers

The principal beverage container recycling program in Saskatchewan is the province-wide depot collection system operated by SARCAN Recycling. The depots in the SARCAN system are listed on pages 32 and 33 of this directory. The other listings under this category are groups that collect containers, such as charities and youth groups, and companies that buy containers. The containers recovered by these organizations eventually are taken to SARCAN depots for refund.

Tires

Of the one million scrap tires generated in Saskatchewan each year, at least 50 percent are recycled through the Saskatchewan Scrap Tire Corporation. End uses include tire-derived fuel, sidewalk blocks, car ramps, landscaping items, mats and fencing.

Waste Dangerous Goods

Some waste materials that are recyclable are considered waste dangerous goods. These include gases, flammable liquids, flammable solids, oxidizing substances and organic peroxides, poisonous and infectious substances, corrosive substances and miscellaneous dangerous goods.

Recyclable waste batteries, solvents and petroleum products fit into the waste dangerous goods category. The *Dangerous Goods Transportation Regulations* cover the transportation and handling of all these materials.

Additionally, Saskatchewan Environment and resource Management has adopted an interim policy on the handling of hazardous recyclables. This interim policy applies to companies that handle used oil, scrap batteries, waste antifreeze, waste solvents or waste paints destined for recycling or acceptable end use. The interim policy is consistent with the department's desire to have less prescriptive regulations with minimal intervention while maintaining an adequate level of risk management and encouraging pollution prevention. For shipments of the five types of materials specified, wholly within the province of Saskatchewan, the waste manifest is replaced by a shipping document which is not submitted to the department. For interprovincial or transboundary shipments and material destined for disposal, all manifesting requirements remain in place. Storage facility construction, operation and decommissioning are not affected. All other requirements of the *Dangerous Goods and Transportation Act and Regulations* and the *Hazardous Substances and Waste Dangerous Goods Regulations* remain in effect.

The five types of materials covered by the interim policy are:

- waste oil
- waste batteries
- waste antifreeze
- waste solvents
- waste paints

Consumer commodities sold by retail stores for household use that become a waste are exempt from the regulations except the following materials:

(A) explosives, other than safety explosives
(B) flammable gases in a cylinder that has a water capacity greater than 45L
(C) poisonous gases
(D) corrosive gases
(E) radioactive materials

If you have waste dangerous goods that cannot be recycled, don't throw them in the garbage or pour them on the ground or down the drain: save them for your community's hazardous goods pickup or drop-off days.

If you are a small business or institution that happens to have more than the quantities of waste dangerous goods listed in the Transportation section below, you are required to register as a consignor and as a carrier or hire a registered carrier to transport the material to a registered recycler. Registration is done through Saskatchewan Environment and Resource Management (SERM).

Transportation

Quantities of waste dangerous goods that can be transported without using a waste manifest are:

Solid waste - less than 5 kg
Liquid waste - less than 5 L
PCB waste - less than 500 g
Miscellaneous waste - less than 100 parts per million of a designated substance that is hazardous to the environment.

If you need to transport dangerous waste in quantities more than those listed above, you must have the material transported by a registered carrier. A registered waste carrier will use a waste manifest issued by SERM to track the shipment.

A waste manifest indicates the name, class, packing group and product identification of the waste and must accompany the shipment at all times until it reaches its destination. This information is essential to emergency response personnel (i.e., fire fighters) to be able to determine what special precautions must be followed at the scene of an accident. As well, the waste manifest is used by SERM as a tracking mechanism to ensure proper handling and disposal of Waste Dangerous Goods.

Antifreeze

Used antifreeze wastes are dangerous because they can contain impurities with toxic heavy metals such as lead, cadmium, chromium and barium. A number of firms in Saskatchewan recycle antifreeze from vehicles, removing the impurities. If you need work done on your vehicle, consider choosing a firm that recycles antifreeze. There are two lists of companies that dispose of antifreeze. One is a listing of firms that only process waste antifreeze generated at their sites, while the other consists of companies that could help dispose of antifreeze waste generated by the general public. There may be a charge for the service and a "lowest amount accepted" stipulation.

Dry-cleaning Waste

The list of companies under this heading may be able to assist you with the disposal of your dry-cleaning waste. Some of these companies are registered with environmental agencies to handle waste dangerous goods, as required under Saskatchewan's *Dangerous Goods Transportation Act*. Others simply coordinate the transportation and disposal of the waste dangerous goods through appropriately licensed firms.

Ozone-Depleting Substances Recoverers

Most appliance service shops and automobile service stations now offer this service. Please check your local telephone directory for other service outlets not listed in this directory and phone them for details.

Waste Batteries

Transporting waste batteries in Saskatchewan is regulated under the *Dangerous Goods Transportation Act and Regulations*. All consignors, carriers and receivers of waste batteries must be registered with SERM.

Waste Flammable Liquids N.O.S., Gasoline or Diesel Fuel, Contaminated with Water

The transportation of waste flammable liquids, including gasoline or diesel contaminated with water, is regulated under the *Dangerous Goods Transportation Act and Regulations*. Full compliance with these regulations must be met before transportation is allowed. All parties involved (consignors, carriers and receivers) must be registered with SERM.

Waste Lubricating Oil

In Saskatchewan, used oil is considered a waste dangerous good. The transportation of used oil is regulated under the *Dangerous Goods Transportation Act and Regulations*. Full compliance with the *DGTA/DGTR* must be met before transportation is allowed. The storage of used oil is regulated by the *Hazardous Substances and Waste Dangerous Goods Regulations*. Full compliance is also required if used oil is stored. Waste oil is included in SERM's interim policy respecting the handling of hazardous recyclables. This interim policy applies to companies that handle used oil destined for recycling or acceptable end use. Please see the **Waste Dangerous Goods** heading above for details.

Large industries and small service industries generate about 80% of the recyclable used oil in Canada (400 million litres) of which 47.5% is recovered through internal collection systems. Backyard generators and farm industries produce 20% of the used oil in Canada (100 million litres) of which only 10% is recovered. In Saskatchewan, thirty-seven million litres of oil is generated annually. According to studies, only twelve million litres of oil is properly transported.

Saskatchewan's *Dangerous Goods Transportation Act and Regulations* stipulate that the consignor (generator) is responsible for properly classifying the waste being offered for shipment. Used lubricating oils are often contaminated with heavy metals, such as lead, cadmium, chromium, barium, etc. from normal equipment wear. In most cases the lead contamination (identified in *DGTR* as L-17) is over the regulated amount, which is five ppm. Used lubricating oil contaminated with lead may be classified as:

Leachable Toxic Waste (L-17)*
P.I.N. NA9500
Class 9.3
Pkg. Group III
*used lubricating oil

If the consignor mixes solvents and fuels with used oil, an analysis may have to be conducted to determine the proper classification and disposal procedure of the waste material. If the waste material is no longer classed as leachable toxic waste L-17 (lead), alternate and often more expensive methods of disposal may be required. The waste material is legally the consignor's property and if its disposal is misdirected, the consignor is ultimately liable. While mixing solvents, fuels, etc. with used oil may seem to be a cheap fix in the short term, it may result in a large liability in the future.

To obtain further assistance respecting *DGTA/DGTR* and the transportation and/or storage of used oil, contact Saskatchewan Environment and Resource Management.

In Saskatchewan, a province-wide used oil recycling program is administered by the Saskatchewan Association for Resource Recovery Corp. (SARRC), a nonprofit corporation formed by the oil and oil filter industry. Two posters have been included with this directory listing used oil carriers and used oil collection facilities registered with SARRC. Please refer to these posters or see the listing on the back cover for further information on contacting SARRC.

Waste Paint or Paint-Related Materials

The transportation of waste paint or paint-related materials, such as thinners and strippers, is regulated under the *Dangerous Goods Transportation Act and Regulations* in Saskatchewan. Full compliance with the *DGTA/DGTR* must be met before transportation

is allowed. All parties involved (consignors, carriers and receivers) must be registered with Saskatchewan Environment and Resource Management.

Saskatchewan's *Dangerous Goods Transportation Act and Regulations* stipulate that the consignor (generator) is responsible for properly classifying the waste being offered for shipment.

Waste paint or paint-related material when indiscriminately released into the environment, can present a danger to the public as a fire hazard, contribute to nausea, headaches and ultimately poisoning. It can also contaminate water bodies and contribute to air and land pollution.

The *DTGR* classifies this material as:

Waste Paint or Paint-Related Materials
P.I.N. UN1263
Class 3.2
Pkg. Group II

If the consignor mixes used oil, other petroleum products or waste material with waste paint, an analysis may have to be conducted to determine the proper classification and disposal procedure. The waste material is legally the consignor's property and if its disposal is misdirected, the consignor is ultimately liable.

Most Saskatchewan cities and some smaller communities operate paint recycling days in cooperation with SaskTel and the Telephone Pioneers. Check the community listings for details.

Waste Solvents

This is a list of companies that may be able to assist you with the disposal of your solvent waste. Some of these companies are registered with environmental agencies to handle waste dangerous goods as required under Saskatchewan's *Dangerous Goods Transportation Act*. Others simply coordinate the transportation and disposal of the waste dangerous goods through appropriately licensed firms.

Re cle
hatever is recy

Through *The Beverage Container Collection and Recycling Program*, SARCAN has collected more than 1.5 billion recycled containers since the partnership agreement was signed with SERM in 1988. This program reduces the amount of waste in the province's landfills and provides employment opportunities for Saskatchewan people.

The Used Oil Collection Program i system for collecting and recycling used ed oil filters and oil containers. Over 50 iers are now registered with SARRC to deli sed oil materials to more than 40 registered processors. In its first year of operation, SARRC collected 70 per cent of Saskatchewan's used oil and 64 per cent of the used oil filters. By March 1999, there were 167 Used Oil Facilities where used oil, filters and containers could be safely disposed.

The Saskatchewan Scrap Tire Corporation is a non-government organization responsible for administering collection and recycling of scrap tires. In September 1998, the Saskatchewan government passed the Scrap Tire Management Regulations mandating retailers to participate in the tire recycling program. More than 1.5 million passenger tires have been collected and processed into items such as playground equipment, flooring and alternate fuels.

Re ce
nsumption and

Each year, thousands of big game hides are donated to the *Saskatchewan Wildlife Federation's Habitat Trust Fund*. These funds help secure critical wildlife habitat which will make a tremendous difference to our wildlife resource.

We also assisted the Saskatchewan Wildlife Federation to establish *Hunt for Hunger*, a program allowing hunters to donate excess game meat to the province's *Food Bank*.

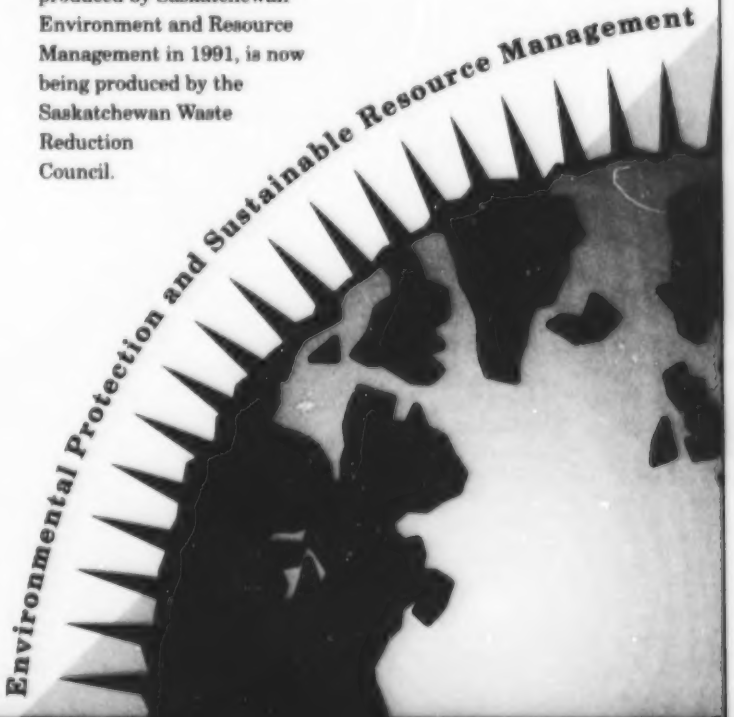
Clean Cat



Saskatchewan Recyclers

We strive to include all recyclers in Saskatchewan, but may have missed some. If we have, please use the listing form at the back of the directory to let us know. A listing in this directory does not imply recommendation or endorsement by the Saskatchewan Waste Reduction Council. We reserve the right to remove or add listings, and to edit information provided by a company or organization.

For your ease in finding help within your community the listings have been arranged alphabetically by community with product subheadings listed beneath. Communities are also indexed by material following this listing.

Phone ahead for hours of operation, minimum quantities accepted and desirable condition of recyclable materials.

In this issue of Reusing and Recycling in Saskatchewan we have discontinued the listing of used oil carriers and receivers under individual communities. This information is now available in two poster-sized inserts provided by the Saskatchewan Association for Resource Recovery Corp. (SARRC). SARRC is a nonprofit corporation formed by the oil and oil filter industry in Saskatchewan to develop, implement and maintain a province-wide used oil recycling program. The posters provide a comprehensive list of registered used oil carriers and used oil collection facilities in Saskatchewan.

Material: IPSCO makes high quality steel products from scrap metal. IPSCO is Saskatchewan's largest recycler reclaiming old autos, farm machinery, appliances and even discarded food cans

Keeping Our Act Clean

Turning today's trash into tomorrow's treasure is our job at IPSCO. After all, steel is the most recycled material on earth. All our new steel comes from reclaiming items like old automobiles, farm equipment, household appliances, even soup and food cans. At IPSCO, we're doing more than keeping our act clean. We're working to keep the planet clean and green.

Words to Live by:

REDUCE
REUSE
RECYCLE

The average Regina household generates about 2,600 pounds of garbage each year. Nearly 30% of all household waste is paper. By adopting the three R's, we can extend the life of the land fill and protect the environment.

Regina

1998/99 ANNUAL PUBLIC STATEMENT

SARCAN RECYCLING

A DIVISION OF THE SASKATCHEWAN ASSOCIATION OF REHABILITATION CENTRES

During the 1998-99 fiscal year, SARCAN Recycling experienced an encouraging **11% increase** in total number of containers recycled, with new recyclables leading the way.

Last year, SARCAN Recycling accepted more than **230 million containers**, 23 million more than in 1997-98, maintaining SARCAN's 92% return rate, one of the highest in North America. By doing so, SARCAN has **diverted nearly 32 million pounds of waste** from Saskatchewan's landfills, and returned over $25 million to the economy through deposit refunds. Materials collected at SARCAN Recycling depots are converted into new products: aluminum becomes new cans; plastic is converted into carpet and clothing; and glass is made into new bottles, fibreglass insulation or reflective beads for highway striping.

Effective April 1, 1998, SARCAN began providing a deposit refund of **5¢ each** for aseptic, non-dairy juice boxes and cartons. In this first year alone, over **8.5 million juice boxes** were recycled. Numbers of another new recyclable, plastic **4L milk jugs,** were also promising; when compared to the last fiscal year, SARCAN accepted nearly double the number of containers on average per month. No refunds are paid for milk jugs.

Here's more good news! We've added **20 new full time equivalent jobs for a total of more than 365 permanent staff**, of whom 80% are persons with disabilities or persons who had previously received Social Assistance. Their employment means reduced Social Assistance payments to the tune of more than $1 million annually. Most importantly, SARCAN creates the dignity of meaningful work for persons with disabilities, providing greater economic freedom, empowerment and personal independence.

DID YOU KNOW?

SARCAN is the recycling division of the Saskatchewan Association of Rehabilitation Centres [SARC], operating **71 depots** in **62 Saskatchewan communities**. SARC is a provincial association of 37 member centres and 25 associate residential members providing programs and services to over 4,000 persons with disabilities.

SARCAN operates a Beverage Container Collection and Recycling System under contract to Saskatchewan Environment and Resource Management [SERM].

Upon purchase, customers pay a deposit and an **Environmental Handling Charge [EHC]** on most ready-to-serve non-refillable beverage containers. The deposit is refunded when customers return containers to a SARCAN depot. The EHC helps finance the cost of SARCAN's comprehensive province-wide collection, processing, transportation and marketing recycling system.

SARCAN receives approximately two-thirds of its revenue from Environmental Handling Charges and one-third from the sale of salvage materials. Total revenues for 1998-99 were $12,158,120. Major expenditures for SARCAN include wages and benefits, rent, utilities/supplies, depreciation and transportation. Total expenditures for 1998-99 were $12,457,218, creating a net loss for the year of $299,087.

REVENUES *for 1998/99*

SERM Contract Revenue: 68.6%
Salvage Material Sales: 30.4%
Other: 3.0%

SARCAN
RECYCLING
A DIVISION OF THE SASKATCHEWAN ASSOCIATION OF REHABILITATION CENTRES

OVERVIEW OF SARCAN

?? DID YOU KNOW THAT..... ??

- SARCAN is the recycling division of the Saskatchewan Association of Rehabilitation Centres. It was formed in May of 1988, to handle the contract for the recycling of non-refillable beverage containers.
- SARCAN currently accepts all ready-to-serve beverage containers made of aluminum, tin/steel, plastic and glass.
- **In the last year, we recycled more than 160 million containers, reducing Saskatchewan's waste by more than 23 million pounds, and returning more than $20.7 million in deposit refunds. SARCAN's return rate of 95% is one of the highest rates in North America.**

Material	Number of Containers	Weight
Aluminum	94,965,622	3,421,355
PET Plastic	45,560,243	4,541,920
Glass	17,387,262	14,300,411
Tin/Steel	1,875,906	881,125
Other Plastic	818,419	136,230
TOTAL	**160,607,452**	**23,271,041 pounds**

- SARCAN operates 70 depots in 62 communities.
- Of these 70 depots, 40 are operated by our SARC Member Centres.
- All SARC member centres operating SARCAN depots receive management fees totalling $370,000 per year and flow through payments totalling $500,000 per year. These payments provide funding support to our Member Centres and provide seed capital to expand the programs they offer for persons with disabilities.
- SARCAN employs more than 301 adults of which more than 80% are persons with disabilities or persons who had previously received Social Assistance. **This results in a reduction of more than $3.5 million in annual savings on Social Assistance.**
- SARCAN pays competitive wages significantly above the minimum wage, and it also provides excellent group benefits and pension plans.

Zero G
Waste Management Program

The Zero G Waste Management Program is in place in nearly every SaskPower office in the province. To achieve the corporation's goal of "Zero Garbage", SaskPower recycles paper, cardboard, batteries, powerline hardware, wire and other materials — greatly reducing the volume of waste materials being diverted to provincial landfills.

SaskPower shares the concepts of the Zero G Program with schools and other organizations, including Saskatchewan Environment and Resource Management (SERM), the City of Regina and the Saskatchewan Roughriders.

SaskPower encourages you to do your part to help keep our province green and our environment clean.

The Saskatchewan Liquor and Gaming Authority supports reuse and recycling by:

Beer Bottle Collection/Recycling

Did you know? In four communities, the Liquor and Gaming Authority provides the only industry recycling centre for empty beer bottles. Province-wide, all 81 of our liquor store outlets, and all 189 franchise outlets accept empty beer bottles for a refund. Each year, approximately 2.7 million bottles are recycled through our liquor stores and franchises.

Cardboard Box Recycling

If you've ever moved in Saskatchewan, you know where the best boxes in town are - at your local liquor store. We provide beverage alcohol boxes to our customers free-of-charge for reuse for packing, shipping, storage, or just about anything you can think of. Boxes not used by our customers are compressed and sent out for recycling. Each year, our warehouse handles more than two million cases of product - that's a lot of boxes!

Office Paper Recycling

The Liquor and Gaming Authority's stores and offices participate in the blue box paper recycling program. Each staff member is encouraged to use the bins. In addition, we offer bins to recycle cans and bottles used by staff. Proceeds from the container recycling go toward staff activities.

By working together now, we can help protect Saskatchewan's resources and environment for the future.

It's Time for Action

We don't have to look far in our communities to see the need for environmental action.

Clean air, clean water, a clean environment and the preservation of our natural heritage is important to us, our children and future generations.

EcoACTION2000 is leading the way. Dynamic partnership and funding opportunities are open to non-profit groups in your community.

ecoACTION2000

Environment Canada Environnement Canada TAKE ACTION for a Healthy Environment. Canada

Saskatchewan Scrap Tire Corporation

Working Together to Improve the Environmental Safety of Your Community

The SSTC is a non-profit, non government corporation that manages the scrap tire recycling program in Saskatchewan.

Since its inception in 1996, the SSTC has managed the collection and processing of over three quarters of one million tires in our province.

WHY IT WORKS

The Success of the tire recycling program is based on:

User Pay System
the cost of recycling tires is paid through a tire recycling fee collected for tire/vehicle/equipment purchasers.

Dedicated Recycling Fee
the recycling fees are used solely for the purpose of recycling tires and managing the program.

Stakeholder Management Board
an independant body of stakeholders make up the SSTC Board of Directors.

HOW YOU BENEFIT

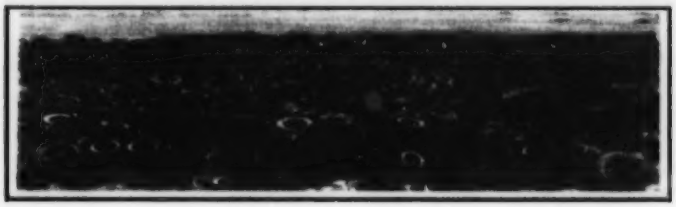
Our residents enjoy a safer, cleaner environment. Approximately one million tires are generated annually in the province, reducing the life of landfills, providing refuge for pests and creating dangerous fire hazards. The SSTC program works to reduce the number of scrap tires in the system.

It saves you money! Through municipal regulations, tire dumping in local landfills has virtually stopped. This means landfill space costs have been reduced saving our residents money!

New businesses and jobs, along with valuable new products made from recycled tires are all beginning to flourish creating a positive, economic impact on our province.

SSTC
P.O Box 1936
Regina, Saskatchewan S4P 3E1
Phone: 306 721-8473 (721-TIRE)
Fax: 306 721-1585

THE TIRE PROBLEM



THE SOLUTION: RECYCLED TIRE PRODUCTS

USEFUL, ECONOMICAL AND GOOD FOR THE ENVIRONMENT

These are a few of the wonderful products being manufactured from recycled scrap tires. These products are highly durable and long lasting. After all, tires are built to last, not breakdown. In fact, there are few man-made things more durable than a tire. The durability of scrap tires means that the products being produced are exceptionally resilient and will stand the test of time. Given their lengthy life span, recycled tire products are highly economical because they are generally a one-time purchase.

Interlocking landscaping bricks

Recycled tires make feather friendly and safe livestock fencing

Ground or pressed tire crumb makes for safer, softer landings in playground areas. Kids love it.

Truck box liners made from recycled tires

Reducing Reusing Recycling

Creative, innovative, even off-the-wall designs for print and web materials that suit both YOUR budget and YOUR schedule.

NATURAL GAS

THE SMART CHOICE FOR THE ENVIRONMENT

NATURAL GAS is the fuel of choice to help preserve and protect the environment. It's the cleanest burning fossil fuel found in abundance in Saskatchewan. And it's a highly efficient source of energy which costs two-thirds less to use than other energy sources.

REDUCE your impact on the environment and **REDUCE** the cost you pay for energy by switching to clean-burning, energy efficient natural gas.

PAINT IT RECYCLED

SaskTel is proud to be a partner with 10 cities, the SaskTel Pioneers and other provincial environmental groups to provide safe recycling of paint for Saskatchewan residents.

In 1999 alone, 173 - 45 gallon drums were disposed of in an environmentally responsible manner.

This program exemplifies SaskTel's environmental commitment beyond the workplace.

SASKTEL Pioneers VOLUNTEERS

SaskTel

Oil Filters Can Go Here

The Saskatchewan Association for Resource Recovery Corp. (SARRC) is a non-profit corporation formed by the oil and oil filter industry in Saskatchewan to develop, implement and maintain a province-wide Used Oil Recycling Program.

Collection Facilities

If you change your own oil, you can deliver used oil, filters or containers to any one of 250 used oil collection facilities in 150 Saskatchewan communities. Additional collection facilities for do-it-yourselfers, called Used Oil, Filter and Container EcoCentres, are opening at many locations across the province. For a list of Saskatchewan collection facilities, see the pull-out poster in this publication or contact SARRC.

Registered Carriers

SARRC pays Return Incentives to registered carriers who pick up used oil, filters [illegible] from [illegible], such as farms and service stations, and deliver [illegible]

For more information, contact SARRC:
